

United States (US)'s reliance on Bosnia and Herzegovina (BA) as collaboration partner (

The scatter plot displays the relationship between Bosnia and Herzegovina's (BA) reliance on the United States (US) as a collaboration partner (%) on the x-axis and the mutual disentanglement of BA's technology domains from the US on the y-axis. The x-axis ranges from 0 to 50, and the y-axis ranges from 0.00 to 0.10. A horizontal dotted line indicates the expected median at 0.03, and a vertical dotted line indicates the median at 4.69%.

Technology domains are labeled with their respective data points. Domains with high mutual disentanglement (y > 0.04) include: United States (US) over-reliant (relative to other domains), mutual entanglement (relative to other domains), Biomass Energy, Green Building, Interdisciplinary Science, Cloud Computing, Edge Computing, Green Computing, Other, and Other. Domains with low mutual disentanglement (y < 0.04) include: EVs, Green Computing, Artificial Intelligence, Quantum Technologies, Satellite Connectivity, Carbon Capture & Storage, Semiconductors/Chips, and Bosnia and Herzegovina (BA) over-reliant (relative to other domains).

Key statistics and trends are highlighted:

- Median = 4.69% (vertical dotted line)
- Expected median = 0.03 (horizontal dotted line)
- Median = 0.02 (dashed line trend)
